MEMORANDUM FOR THE RECORD

SUBJECT: Concept Selection - Task 1 - Mid-1970's Photo Interpretation
System (DK-437)

25X1 1. On 1 July 1969, a special committee assembled in the TSSG conference
25X1 room for the purpose of selecting three of the eight concepts developed by
[] as representative of the predicted near ideal mid-1970's photo inter-
pretation system, for further detailed study. This committee was composed
of the following persons:

25X1 2. [] project officer for this task presented
an overview of the logic used in arriving at the eight concepts and then
answered questions posed by the committee. It was then agreed that each
25X1 member of the committee would make his selection of the three concepts in-
dividually and advise [] of his selection no later than 4 July 1969.

25X1 3. The selections made by the members of the committee (designated
25X1 by the symbols used by [] in its report DK-437) were as follows:

3M	3A	1A
3M	1M	2A
3M	4M	1A
3A	4A	1A
4M	4A	2A
3M	1M	3A

4. On 7 July 1969, a majority of the committee met again in the TSSG
conference room and, after discussing the individual selections, agreed on
the following selection of concepts: 3M-4A-1A. Part of the rationale
behind this choice was that these three concepts included all of the equip-
ment expected to be available during the mid-1970's period. Of course, the
choice was also influenced by factors of projected cost, personnel, space,
etc.
